

BUILD FORTIFIED

STRENGTHEN YOUR ROOF AND BE READY

3 WAYS FORTIFIED ROOF OFFERS EXTRA PROTECTION

Stronger Connections - Your Roofing Contractor will use more – and stronger – nails in an enhanced pattern proven to help keep the roof attached to your house, even in severe weather.

Sealed Seams - In extreme winds, even the best roof may lose shingles. To prevent water from pouring into your home, your Roofing Contractor will seal the gaps between your roof's decking.

Reinforced Edges - Studies show roof edges are especially vulnerable to wind damage. A FORTIFIED Roofing Contractor uses materials specifically designed to lock them down.

3 STEPS TO A FORTIFIED ROOF

If You Want Peace of Mind
When the Next Storm
Hits, 3 Simple Steps Can
Lower Your Risk of Storm
Damage And Lower Your
Insurance Costs, Too!

Backed by
Science

On the Coast, severe weather brings powerful winds, torrential rain and even dangerous hurricanes. Your Contractor offers FORTIFIED Roof™ packages developed using cutting-edge science to help you defend your home. Based on two decades of research by the Insurance Institute for Business & Home Safety, the FORTIFIED building standards define a series of upgrades that go beyond typical building codes to make homes stronger and better able to guard against severe weather.
